```python
#Write a python program to find those numbers which are divisible by 7 and multiples of 5, for user input
```

```python
a = int(input("Enter a number:"))
if a%7==0:
    print(a,"The number is divisible by 7")
if a%5==0:
    print(a,"The number is multiples of 5")
else:
    print(a,"The number is not divisible by 7")
```

```
Enter a number: 35
35 The number is divisible by 7
35 The number is multiples of 5
```

```python
#Write a python program to check the user input is even or odd or zero.
```

```python
p=int(input("Enter the number:"))
if p==0:
    print("The number is zero")
elif p%2==0:
    print("The number is Even")
else:
    print("The number is odd")
```

```
Enter the number: 10
The number is Even
```

```python
#Print decimal part of an input number.If the decimal part is zero print the string:"INTEGER"
```

```python
a=float(input("Enter the number:"))
b=a-int(a)
if b==0:
    print("INTEGER")
else:
    print("Decimal part is: ",round(b,2))
```

```
Enter the number: 25.00
INTEGER
```
